
EMO trade fair follow-up: Visitors fascinated by Supfina technology

Wolfach, 17 October 2011

The EMO 2011 in Hanover was an unqualified success for Supfina Grieshaber, one of the leading manufacturers of surface finishing systems, both machines and attachments.

At the trade fair, the company exhibited machines representing their three key production areas superfinishing, double disk grinding and LeanSystems. Visitors to the Supfina exhibition stand were given the opportunity to gain an insight into the applications' potential and technological advantages of the Supfina range of products.

A special highlight of the show was the technology and design of the Race series of superfinishing machines. With its enclosed wave-shaped front and high-grade appearance, the new Race mirrors the considerable quality requirements of this superfinishing process and Supfina's dedication to a high-profile solution. While retaining the tried-and-tested technology, the focus has been placed on ease of operation. The two machining stations are arranged in a clear, tidy manner and meet all customer requirements for workpiece diameters from 62 to 160 mm, a maximum workpiece width of 65 mm and a swivelling angle from 0 to 55°. The machine is designed for superfinishing for single and double raceway deep groove, inclined and self-aligning roller bearings.

With this technology, Supfina is setting new standards for its highly successful "Race" machine concept.

Short profile: Supfina Grieshaber GmbH & Co KG, with facilities in Germany, the United States and China, is one of the world's leading manufacturers of surface machining technology. The company's range of products includes machines and attachments for superfinishing, double-sided plano-grinding and precision grinding. Based on decades of experience and driven by a continuous development process, Supfina researches new technology, develops and applies it to the reality of demanding production conditions. Consistent orientation towards customers and service are essential elements of the company's traditional success.
